## About Mann Tek

Mann Teknik AB is a Swedish company located in Mariestad, Sweden.

Mann Teknik AB produces and markets products for safe and environmentally friendly handling of aggressive fluids for the chemical and petrochemical industries.

The main product is the Dry Disconnect Couplings, DDCouplings®, for spill free liquid handling. The products are marketed through independent representatives in more than 30 countries.

Mann Teknik AB have many years of experience in designing, producing and marketing of DDCouplings® all since 1977.

Mann Teknik AB has shown a high rate of growth during the past years and is now a major player in its specialized field of operation. This is due to a determined expansion into growing markets and recognition by customers of the robust design and reliable quality of the products.

Mann Teknik AB are certified to ISO9001:2008. The products are CE-labeled. The main products are certified to PED, the European Pressure Equipment Directive and ATEX, the European directive for Equipment intended for use in Potentially Explosive Atmospheres.

The products are produced in accordance with several important standards, e.g. the NATO STANAG 3756

## Ball Valves / 2-way Ball Valves in Aluminium

Full Flow Ball Valves and 2-way Ball Valves are specially designed for handling different types of fuels such as diesel, gasoline, Jet fuel etc. in Tank trucks. Mann Tek Ball Valves in Aluminium offer weight saving benefits to the road tanker industry and they are also used in different types of fixed plant and mobile fuelling applications.

All sizes of Mann Tek Ball Valves and 2-way Valves are available with pneumatic actuation in either single or double acting form.

### Sizes

2" (DN 50) to 4" (DN 100)

### Connections:

Full Flow ball Valves and 2-way Ball Valves are available with BSP- and NPT-threads and with flanges (DIN, ANSI, TW, TTMA, EN 1092-1:2001).

### Maximum Working Pressure:

MWP PN 10  
MAWP 150 psi

### Material:

**Body:** Aluminium  
**Ball:** Aluminium  
**Spindle:** Stainless Steel

### Seals:

Teflon® (PTFE), Viton® (FPM).  
Other Seals on request.

### Working temperature - Seals material

Lowest Operation Temperature:

With Seals Material:	Lowest Temperature:
FPM (Standard Viton)	-20° C / -4° F
NBR	-25° C / -13° F
Low temperature NBR	-40° C / -40° F
FQM (Flourosilicon)	-55° C / -67° F

*These materials must be tried individually and are subject to no obligation. Always check with chemical compability chart before use. Used with for example: Petrol, diesel, aviation fuel.*

### Recommendations and approvals:

### Ball Valves in Aluminium.

### 2-way Ball Valves in Aluminium.

### Ball Valves in Aluminium with pneumatic actuator (springreturn or double acting).

### 2-way Ball Valves in Aluminium with pneumatic actuator double acting.

## Business segment - Ball Valves

**Aviation**

**Tank Trucks**

**Military**

## General information Full Flow Ball Valves

### Advantages

- Unflattened flanges do not affect the balls torque.
- All wetted parts in: Aluminium, Stainless Steel, FPM (Viton®), PTFE (Teflon®). No Yellow parts.
- The sealing stays in its position also when you are regulating high flowrates.
- Low pressure drop.
- Easy to service: The spindle can easily be dismantled, even if the ball valve is installed.
- The valve is assembled as one unit - not kept together by the flanges.
- Inbuilt measurements as common standard.

### Apragaz Type approval

**Ball Valves acc. to ADR, RID, IMDG**  
**2-way Valves acc. to ADR, RID, IMDG**

### Applications for Ball Valves

- Petroleum tank trucks
- Tank trucks for solvents
- Dispenser and Tank trucks for aircraft refuelling
- Stationary and mobile equipment for aircraft refuelling
- Valves for the paint industry
- Valves for the oil industry
- Waste water for railwagons

## Advantages - Ball Valve in Aluminium

The spindle can easily be dismantled even when the ball valve is installed.

Pneumatic actuators available for all sizes, 90° operating, single/double acting.

Irregular or crowned flanges do not affect the ball torque.

All wetted parts in Aluminium and Stainless Steel, Sealings in FPM (Viton®) and PTFE (Teflon®).

The biggest run of all brands.

The sealing stays in its position also when you are regulating high pressure drop.

Inbuilt measurements replace other brands

The valve is assembled as one unit - not kept together by the flanges

Minimum liquid remains in the ball valve

## Advantages - 2-way Ball Valve in Aluminium

The spindle can easily be dismantled even when the ball valve is installed.

Pneumatic actuators available for all sizes, 180° operating, single/double acting.

Irregular or crowned flanges do not affect the ball torque.

All wetted parts in Aluminium and Stainless Steel, Sealings in FPM (Viton®) and PTFE (Teflon®).

The flowrate through the ball is optimized for low pressure drop.

The sealing stays in its position also when you are regulating high pressure drop.

Inbuilt measurements replace other brands

The valve is assembled as one unit - not kept together by the flanges

## 2-way Ball Valves in Aluminium with pneumatic actuator double acting

**Description:** Ball Valves Dim DN 50-100 / 2"-4", W.P 10 bar / 150 PSI.

Flanges available in aluminium or steel. Flange seal in Viton® (FPM). Ball seal in Teflon® (PTFE). Other materials and connection on request.

ATEX approved

## Ball Valves - Special on request

### 3" Ball Valve

#### Connection:

Aluminium flanges TW1 (both sides).

#### Extra:

Female BSP 1/4" thread for draining or sensors (pressure, temperature)

**Ball Valves - Special on request****3" Ball Valve with  
Aluminium female flanges****Connection:**

One side female 3" BSP  
thread and other side  
male 3" BSP thread.

**Code No.** B400A1001 + 1322 -1B + 1329-1B**3" Ball Valve with  
Aluminium flanges****Connection:**

One side Aluminium welding  
flange Ø89 mm and other  
side Aluminium flange TW1

**Code No.** B400A1001 + 1340 -1 + 1327-1**3" Ball Valve with  
Aluminium flanges****Connection:**

One side 3" BSP male and  
other side Aluminium flange TW1

**Code No.** B400A1001 + 1329 -1B + 1327-1

## Ball Valves - Special on request

### 4" Ball Valve with Aluminium flanges

#### Connection:

One side 4" BSP male threads and other side 4" BSP female threads flanges

### 4" Ball Valve

#### Option:

- Long handle
- Steel Zink plated, or Stainless steel
- Body anodised, black
- Not electrical conductivity

### 4" Ball Valve

#### Option:

- Painted according to RAL (Color standard for Military)
- Bolts and nuts in Stainless steel.

#### Examples of Military RAL colours

#### **RAL 6014**

Yellow Olive  
- Dutch Army

#### **RAL 6031**

Bronze Green  
- Dutch, Germany, Denmark, Spain, Italy and Sweden.

#### **RAL 8027**

Leather Brown  
- Germany

#### **RAL 9021**

Tar Black  
- Germany

## Accessories - pneumatic actuators

### SOLENOID VALVE JOUCOMATIC NAMUR 5/2 - 3/2

#### Multi function 3/2 or 5/2 for SR/DA-actuators

The solenoid valve is delivered with two different namurplates. One for 3/2- ways and one for 5/2- ways. The valve is directly mounted on a WM-actuator

#### Solenoid Valve designation:

Solenoid Valve Namur 3/2

Solenoid Valve Namur 5/2

#### Specifications:

<b>Body:</b>	Aluminium, anodized
<b>Pressure:</b>	2 – 10 Bar
<b>Enclosure:</b>	IP 65
<b>Temperature:</b>	-25°C - +60°C
<b>Coils:</b>	12, 24, 48, 110 and 230V AC/DC
<b>Connector:</b>	mPm-Connector, PG11
<b>Operators:</b>	Pilot: Solenoid, air Return: Spring
<b>Air inlets:</b>	BSP 1/4"
<b>Options:</b>	Ex-coil Double pulse coil Connector with LED varistor Connector with cable Silencer/Speed control

#### Namur connection

ATEX approved

## Accessories - pneumatic actuators

### LIMIT SWITCH BOX WM-ITS100

#### Specifications:

<b>Body:</b>	Aluminium, epoxy – powder coated
<b>Enclosure:</b>	IP 67 CE- Marked
<b>Shaft:</b>	Stainless steel
<b>Bracket:</b>	Stainless steel
<b>Switch cams:</b>	Adjustable, preset for 90°
<b>Cable inlets:</b>	2x M20
<b>Terminal block:</b>	Plastic, 8 -ways
<b>Mechanical switches:</b>	2 pcs. Max 250V AC 16A, 125 V DC 0.6A

#### Limit Switch Box designation:

Switch Box WM-ITS 100

#### Alternative Switches

<b>Proximity sensors:</b>	2 pcs. type V3, IFM IS 5001, 10-36V DC PNP
<b>Proximity sensors:</b>	2 pcs type V3, IFM NS 5002, 5-25V DC Namur

## Electric Actuators - Mechanical mounting

### DIMENSIONS OF THE ACTUATOR

- The actuator is set to its closed position in our factory.
- Possible fixations : F05 (4xM6 with Ø50) and F07 (4xM8 with Ø70), star 17, depth 19mm.
- Do not mount the actuator « upside down ».
- Necessary height above the valve for the mounting of the actuator : H=300mm.

### EMERGENCY MANUAL OVERRIDE

In case of an electric supply failure, it is possible to operate the actuator manually :

- Turn the knob (appendix p.14 mark 9) to position MAN and hold it in position.
- Turn the outgoing drive shaft of the actuator with the help of an adjusting spanner.
- In order to re-engage the reduction, release the knob.

### MOUNTING / DISASSEMBLY OF THE COVER AND POSITION INDICATOR

For the wiring and setting of the actuator, it is necessary to remove the cover.

- Mounting of the cover (appendix p.14 mark 2) : make sure that the seal ring (appendix p.14 mark 7) is correctly placed in its position, grease of the flame path (Molydal 3790 grease or equivalent), mount the cover and tighten the 4 screws M6 (appendix p.14 mark 3, torque : 6Nm).
- Mounting of the position indicator (appendix p.14 mark 1) : fit the indicator onto the outgoing axle.

## Electric Actuators - Electric Connection

The caps placed on M20x1.5 threaded openings (appendix p.14 mark 15) must be replaced by AT certified connection glands.

- remove the position indicator, unscrew the four screws and take off the cover.

**RESPECT SAFETY INSTRUCTIONS**

### SUPPLY AND CONTROL WIRING

- ensure that the voltage indicated on the actuator ID label (appendix p.14 mark 11) corresponds to the voltage supply.
- connect to earth through the exterior bolt M5 located under the cable gland (appendix p.14 mark 16). It is also possible to connect the actuator to earth inside the actuator through the bolt M3 next to the terminal strip (appendix p.15 mark A).
- unscrew the left cable gland and insert the cable.
- connect the wires to the terminal strip (appendix p.15 mark B) in accordance with the required control mode.

3-points modulating mode

on-off mode (pre-set to closed)

- Put a lacing cord around the wires (see the picture beside) and re-tighten the cable gland.

### WIRING OF THE FEEDBACK SIGNAL

Our actuators are equipped with two simple limit switch contacts normally set in their open position (N). As per factory setting, the white cam is used to detect the open position (F 1) and the black cam is used to detect the closed position (F 2). This feedback system accepts voltages between 24 V and 240 V AC.

- unscrew the right cable gland and insert the cable.
- remove 25mm of the cable sheath and strip each wire by 8mm.
- connect the wires to the terminal strip (appendix p.14 mark 12) in accordance with the diagram beside.
- Tighten the cable gland.

### SETTING OF END LIMIT SWITCHES

The actuator is pre-set in our factory. Do not touch the two lower cams in order to avoid any malfunctioning or even damage to the actuator.

- To adjust the position of the auxiliary contacts, make rotate the two superior cams by using the appropriate wrench.

- Re-mount the cover, fasten the four screws and attach the position indicator.

# Electric Actuators - Instructions

## DESCRIPTION

The electric actuators A P S have been designed to perform the control of a valve with 90° rotation. Please consult us for any different application. Valpes cannot be held responsible if the mentioned actuators are used in contradiction to this advice.

## SAFETY INSTRUCTIONS

To ensure safety during the installation of the product

- The electric power supply must be switched-off before any intervention on the electric actuator (i.e. prior demounting its cover or manipulating the manual override knob). Wait 30 minutes before opening the cover.
- Any intervention must only be carried out by a qualified electrician or other person instructed in accordance with the regulations of electric engineering, safety, and all other applicable directives.
- Strictly observe the wiring and set-up instructions as described in the manual: otherwise, the proper working of the actuator can not be guaranteed anymore. Verify that the indications given on the identification label of the actuator fully correspond to the characteristics of the electric supply.
- The product must be protected by an easily accessible electric safety device (power isolator) corresponding to its power.
- As stipulated in the applicable regulation, the connection to earth contact is compulsory for devices with working voltages exceeding 42 V.

- Used symbols :  Danger : risk of electric shock  earth protection  Direct and alternating voltage

- The caution label on the manual must be placed on the actuator. See the connection diagram.

## TRANSPORT AND STORAGE

- The forwarding agents being held as responsible for damages and delays of the delivered goods, the consignees are obliged to express if applicable their reserves, prior to accept the goods. The goods delivered directly ex works are subject to the same conditions.
- The transport to the place of destination is carried out by using rigid packing material.
- The products must be stored in clean, dry, and ventilated places preferably on appropriate palettes or shelves.

## MAINTENANCE

- Maintenance is ensured by our factory. If the supplied unit does not work, please check the wiring according to the electric diagram as well as the power supply of the concerned electric actuator.
- For any question, please contact our after-sales service by phone 0033-476350606 or by email : [info\\_valpes.com](mailto:info_valpes.com).
- To clean the external elements of the unit, please use a wet rag.

## GUARANTEE

- 100% of the actuators are fully tested and set in the factory.
- The A P S products are guaranteed two years from the delivery date or 50,000 operating cycles against all types of manufacturing and material faults (operating time and model class according to standard I34).
- This guarantee will only be valid if the unit has not been disassembled or self-repaired during its service life. It does not cover any wear and damage caused by shocks or faulty operation neither by the use of the unit under conditions not in accordance with its nominal characteristics. The guarantee is strictly limited to the replacement of original parts found defective on checking by our service personnel. The cost of shipping to our premises, the return of devices to the customer as well as the repair cost will be chargeable. We will not assume the responsibility for any direct or indirect accidents/risks originated by a failure of our products. The guarantee does not cover the consequences of breakdown and excludes any payments for indemnities. The accessories and adaptations are excluded from the guarantee. In the case where a customer has not proceeded to payments within the agreed period, our guarantee will be suspended until the delayed payments have been received and with the consequence that this suspension will not prolong the guarantee period in any case.

## RETURN OF GOODS

- The customer is obliged to check the conformity of the goods with regard to their definition at the time of delivery.
- The acceptance of the goods by the purchaser disclaims the supplier of all responsibility if the purchaser discovers any non-conformity after the date of acceptance. In such case, the repair cost will be borne by the purchaser who will also exclusively bear all financial consequences of any resulting damage. Returned goods will only be accepted if our prior agreement has been given to this procedure: the goods must be sent free of all cost and being shipped solely and in their original packing. The returned goods will be credited to the purchaser with a reduction of 20% on the unit's price charged in accordance with the original invoice of the returned goods.

**Do not mount the actuator in the presence of a magnetic field.**  
**Do not mount the actuator in the presence of a magnetic field.**

## About NPT and BSP threads

### NPT

**Sealing NPT threads can be an exasperating experience if certain techniques are not followed. The following tips will help alleviate many common problems in thread sealing:**

1. Always use some type of sealant (tape or paste) and apply sealant to male thread only. If using a hydraulic sealant, allow sufficient curing time before system is pressurized.

2. When using tape sealant, wrap the threads in a clockwise motion starting at the first thread and, as layers are applied, work towards the imperfect (vanishing) thread. If the system that the connection being made to cannot tolerate foreign matter (i.e. air systems), leave the first thread exposed and apply the tape sealant as outlined above.

3. When using paste sealant, apply to threads with a brush, using the brush to work the sealant into the threads. Apply enough sealant to fill in all the threads all the way around.

4. When connecting one stainless steel part to another stainless steel part that will require future disassembly, use a thread sealant that is designed for stainless steel. This stainless steel thread sealant is also useful when connecting aluminium to aluminium that needs to be disconnected in the future. These two materials gall easily, and if the correct sealant is not used, it can be next to impossible to disassemble.

5. When connecting parts made of dissimilar metals (i.e. steel and aluminium), standard tape or paste sealant performs satisfactory.

6. For sizes 2" and below, tape or paste performs satisfactory. When using thread tape, four wraps (covering all necessary threads) is usually sufficient.

7. For sizes 2½" and above, thread paste is recommended. If thread tape is used, eight wraps (covering all necessary threads) is usually sufficient. Apply more wraps if necessary.

Figure NPT

8. For stubborn to seal threads, apply a normal coating of thread paste followed by a normal layer of thread tape.

9. For extremely stubborn to seal threads, apply a normal coating of thread paste followed by a single layer of gauze bandage followed by a normal layer of thread tape.

#### Caution!

When this procedure is done, the connection becomes permanent. Extreme measures will be necessary to disconnect these components. All other measures to seal the threads should be explored prior to use of this technique.

10. Over-tightening threads can be just as detrimental as insufficient tightening. For sizes 2" and below, hand tighten the components and, with a wrench, tighten 3 full turns. For sizes 2½" and above, hand tighten the components and, with a wrench, tighten 2 full turns.

### BSP

**The threads are parallel with flat sealing surface.**

This allows to use the full thread length for screwed-on parts. The largest possible transfer of force is guaranteed for short length. The thread seal behind the relief groove of the thread cannot drop out.

Simple screwing down, makes a safe connection. Subsequent tightening during operation is possible at any time. Change of seal and new assembly do not require any expert knowledge.

The European standardisations for hose assemblies require parallel threads with flat seals, because of the advantages.

Figure BSP

## Explanation of designations 2/2

Ver 1312

### Fifth sign (letter): Indicates version

A = Version No.1 (Machined from bar)	G = Drain connection	N = Non Return Valve
B = Version No.2 (Casted)	H = Leaf spring lock	O = Slim version Break Away
C = Version No.3 (Kokill casted)	I = Bended Tank Unit Short (15°)	P = Pressure (Custom)
D = Sep. piston guide	J = Bended Tank Unit (15°)	S = Sight Glass
E = Injection moulded	K = Short Tank Unit/Swivel	T = Transparent
F = 6" Flange Hydrant	L = Long Tank Unit/Swivel	U = Stop before disconnected

### Sixth sign (numeral): Indicates material in the coupling body

1 = Aluminium	6 = Titan
2 = Brass	7 = Hastelloy
3 = Steel	8 = PVDF
4 = Stainless steel A4 (316)	9 = PEEK
5 = Stainless steel A2 (304)	K = Inconel

### Seventh sign (numeral): Indicates material in the innerparts or other components

1 = Aluminium	6 = Titan
2 = Brass	7 = Hastelloy
3 = Steel	8 = PVDF
4 = Stainless steel A4 (316)	9 = PEEK
5 = Stainless steel A2 (304)	K = Inconel

### Eight and Ninth sign (numeral): Indicates the O-ring material in the coupling

01 = Viton® (FPM/FKM)	16 = Hypalon® (CSM)	33 = EPDM 291
02 = Nitrile (NBR)	17 = Chemraz® 505 (FFKM)	34 = Kalrez® 0040
03 = EPDM	18 = Xyflour® 860 (AFKM)	37 = Chemraz® 510 (90 Shore)
04 = Kalrez® (FFKM)	19 = Zetpol® / Therban® (HNBR)	40 = FEP PTFE encapsulated Viton®
05 = NBR Low temp	20 = NBR 90 shore	47 = Chemraz 605 High Temp
06 = Teflon® (PTFE)	21 = Viton®-GF (Special Viton quality)	50 = Kalrez® (PFPM) 1050LF
07 = Neoprene® (CR)	22 = Composite	51 = Nylon® (PA)
08 = Silicone (VMQ)	23 = Viton® GFLT-S	61 = Viton® (FPM), FDA, USP C6 & ADI
09 = Vulkollan® (PUR)	24 = Viton® GLT	62 = Nitrile (NBR), FDA, USP C6 & ADI
10 = Butyl (IIR)	25 = Klingerit®	63 = EPDM, FDA, USP C6 & ADI
11 = Nitrile (Gasol NBR 70 K-6)	26 = POM	64 = Kalrez® (FFKM) 6230, FDA, USP C6 & ADI
12 = Perfluorelastomer (FFPM/FFKM)	27 = Epichlorhydrin (ECO)	66 = PTFE (Virgin), FDA
13 = PVC / NBR	28 = Viton® GFLT-S NMO	71 = FPM/FKM Low Temp
14 = Fluorsilicone rubber (FVMQ)	29 = FPM/FKM High Temp	75 = FEP Silicone, FDA, USP C6 & ADI
15 = FEP encapsulated silicone	31 = Viton® 90 Shore (FPM/FKM)	77 = Chemraz® SD517, FDA, USP C6 & ADI
		83 = EPDM BAM

### Tenth sign (letter): Used for extra

A = Flat seal, Teflon®(PTFE)	M = Modified Cam Curve	V = Locking house unit
B = Flat seal, Vulkollan®(PUR)	N = No Branding	W = Double ball race
C = 2-way Ball Valve	NA = No Actuator (Ball Valve)	X = Special surface treatment
D = Flat seal, Viton® (FPM)	P = Pressure Equalizing Valve	Z = Excentric tank unit
DA = Double Acting (Ball Valve)	Q = Reduced bore diameter	-RA = Racing
E = None projecting piston spindle	(Argus,Hydrant)	-LC = Locking Cap
F = Flange thickness acc. to standard	R = Hose unit with int. Break Away	-S = FEP O-ring in Hose Unit swivel
G = Hypalon	S = Single Argus valve (Hydrant)	-ST = Steam
H = Nitrile (NBR)	SR = Spring Return (Ball Valve)	-XL = Oversized swivel
I = Emco comp	T = TW-Flange extended circles	-45 = 45 Mesh
J = EPDM	U = Pressure Bleeding Valve 16 bar	-60 = 60 Mesh
K = Locked piston guide	U5 = Pressure Bleeding valve 5 bar	-10 = 100 Mesh
L = Locked thread	U20 = Pressure Bleeding valve 20 bar

Goodrich, Chemische Werke Hüls, Daikin, Dow Company, DSM, Du Pont, DuPont Dow Elastomers, Esso Chemie, Hercules, Hoechst AG, Montedison, Monteflous, Nippon Zeon, Polysar LTD., Rhone Poulenc, 3 M Company, Wacker Chemie, Precision Polymer Engineering Ltd.

## How to Order Ball Valves / 2-Way Valves with different Flanges

### Ball Valve

**Code No.** Body + Flange ① + Flange ②

Bolts, nuts and handle in Steel Zink plated. Stainless steel on request.

### 2-Way Valve

**Code No.** Body + Flange ① + Flange ② + Flange ③

Bolts, nuts and handle in Steel Zink plated. Stainless steel on request.

## Questionnaire - Aluminium Ball Valves / 2-Way Valves

Name	
Address	Title
Company	Department
Area	Country
Phone	Fax

### Produkt data / Produktdaten:

Connection	Quantity
Ball valve <input type="checkbox"/>	2-way Ball valve <input type="checkbox"/>
Internal thread	Connection
Material	Electrical
Other remarks	

### Flow data:

Medium	Temperature
1	
2	
3	
4	
Working pressure	Area

### Customers note:

## Service

### Maintenance and service instruction

Always depressurise the system and rinse off the parts before beginning any maintenance work. Use protective goggles. Do not handle O-ring seals if the material appears charred, gummy or sticky.

Use tweezers and wear neoprene or PVC gloves. Do not touch adjacent parts with unprotected hands. Rinse off the parts once again before starting the “daily inspection”

### Daily inspection:

- 1 Inspect the Ball-Valve surface for cleanliness and corrosion
- 2 Inspect the spindle and the spindle bushing that they are without leakage and fixed assembled
- 3 Inspect the Ball-Valve unit for faultlessness and external signs for leakage

Do not remove this tag until installation is approved by user

### Three-month inspection

1. Exterior cleaning of the Ball Valve with a neutral cleanser.
2. Careful “daily inspection” of cleaned units.

### Once a year

1. Exchange sealing and washer at least once a year.
2. Refill grease where needed
3. Replace worn or damaged components. Repair procedures are straightforward and no special tools are required.

Check the state of the connection surface and verify that it is clean before proceeding with the connection.

Check for correct operation of the valve. Switch the unit(s) several times.

Use only original Mann Technik spare parts for maintenance.

Support ring kit (S-BSRX-yy)

Handle kit (S-BSHX-yy)

X and yy means the size and the material key according to the product catalogue. You will find it also as the 2nd to 8th/9th sign in the serial number (eg. BX00A10yy).

## Repair service and certificate of decontamination

### REPAIR SERVICE

To comply with Health & Safety Regulations, all returned couplings and valves must be accompanied by a Certificate of Cleanliness and a Data Sheet for the last product carried (even the cleaner).

### CERTIFICATE OF DECONTAMINATION

We certify that the returned couplings/valves have been cleaned prior to despatch and are free of any harmful substances.

## Product Information

**ou in**  
Dry Disconnect Coupling.  
1" to 8", PN 16 - PN 25. Aluminium, Brass-Gunmetal, Stainless Steel and PEEK. Other materials on request. According to NATO standard TA A

**ou in**  
Dry Gas Coupling.  
1 to 2 tain e tee  
Other materials on request.

**ou in**  
Dry Aviation Coupling.  
2½", PN 10. Main body in Aluminium. standard ISO 45, MS 24484, NATO TA A 10 British Aerospace Spec. 2C14.

**am in nt**  
or rain unit  
tain e tee 10 0 1 4404 AT  
(AISI 316L). Ball Valve in 1.0619 and 1.4301

**u o a a**  
2" to 4", PN 10, Aluminium.  
Ballvalve and 2-way Ballvalve.  
Made for Petroleum Tank Trucks. Variations of flange connection

**i oint**  
to 10 10 2  
Aluminium, Brass-Gunmetal,  
tain e tee  
Other materials on request.  
Connection: BSP, NPT. Flanged connection (DIN, ANSI/ASA e.t.c)

**ou in**  
**ot ri**  
Industrial and Marine Fast Release Couplings.  
Aluminium, Brass, Stainless Steel, 1" to 12", female/male threads and with flanges, with breaking bolts.  
Fast Release Couplings  
Stainless Steel, PN10 / PN 25. 2" to 4", female threads. " to 12", flanged connection
